

# Klik Black Lighting Connection

Designed for darkened, visible ceiling voids.

The Klik 4 Black range of products are designed to disappear where dark, open or industrial style ceilings are specified for a project.

This simple optimised range includes all the essential klik products, we have included just one socket type which can be used for both standard and emergency lighting and an Occupancy Sensor for standard (non-digital) lighting which can be flush or surface mounted.

Klik Black Products are customer wire-able only to provide flexibility with cable choice, for instance where pre-wired decorative luminaires are used or special cable grades and colour are required.

All klik black connection products are tested to the same British Standards as standard klik products offering you the re-assurance that you are installing a product that is compliant, safe and has undergone even more arduous testing (BS 6972) for specific lighting applications.

Klik 4 & Klik 4 Black are compliant with: BS 6972:1988 luminaire supporting couplers for domestic, light industrial and commercial use. BS 5733:2010 General requirements for electrical accessories.

PCR2000BLACK
